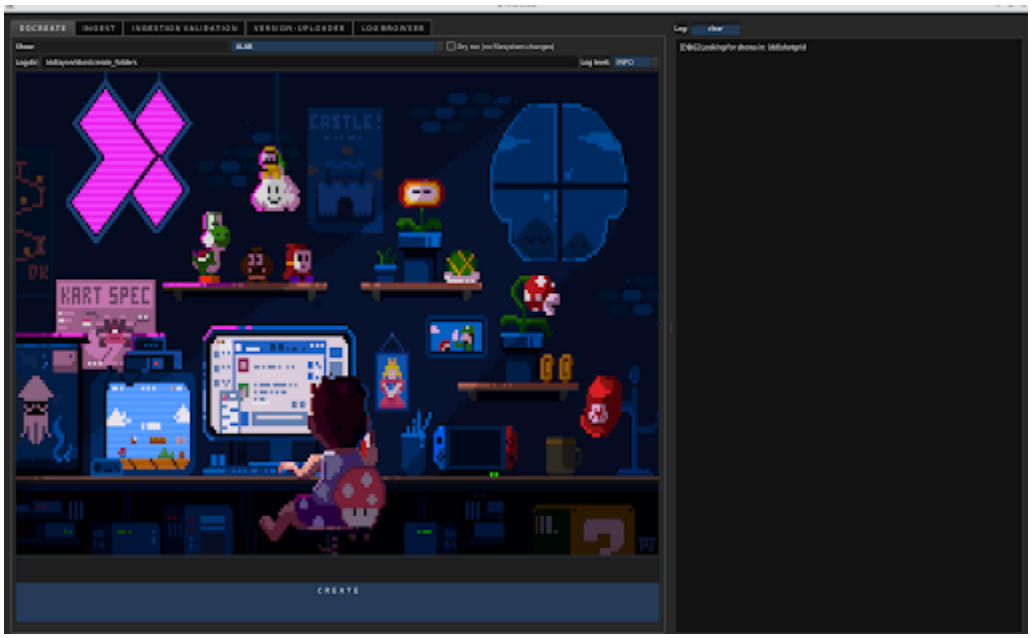
📌 DIO Application – User Guide

🔹 Launching the Application

- Open a terminal and start the DIO application.
- The application window will open.
- Note: The **“Cancel Ingest”** option is currently **not working**.
- To use the ingest features, log in using your **username and password**. 📌

DDCREATE Tab

- Navigate to the **DDCREATE** tab.
- Select the **Show**.
- Click on **Create**.
- This will generate a **file structure locally** on your system.



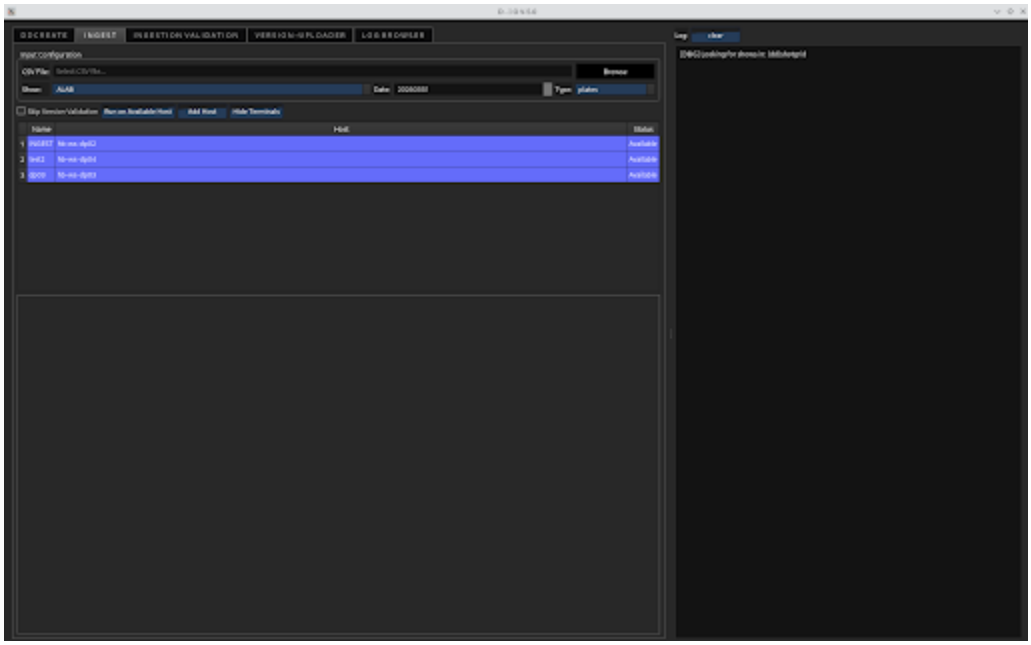
📥 Ingest Tab

- Select the **Show** and **Date**.
- Choose the required type from the dropdown:

    - Plates
    - Annotations
    - Avid RIFs
- Click **Run on Available Host**:
    - The system will automatically pick the host machine.
    - Ingestion process will start.

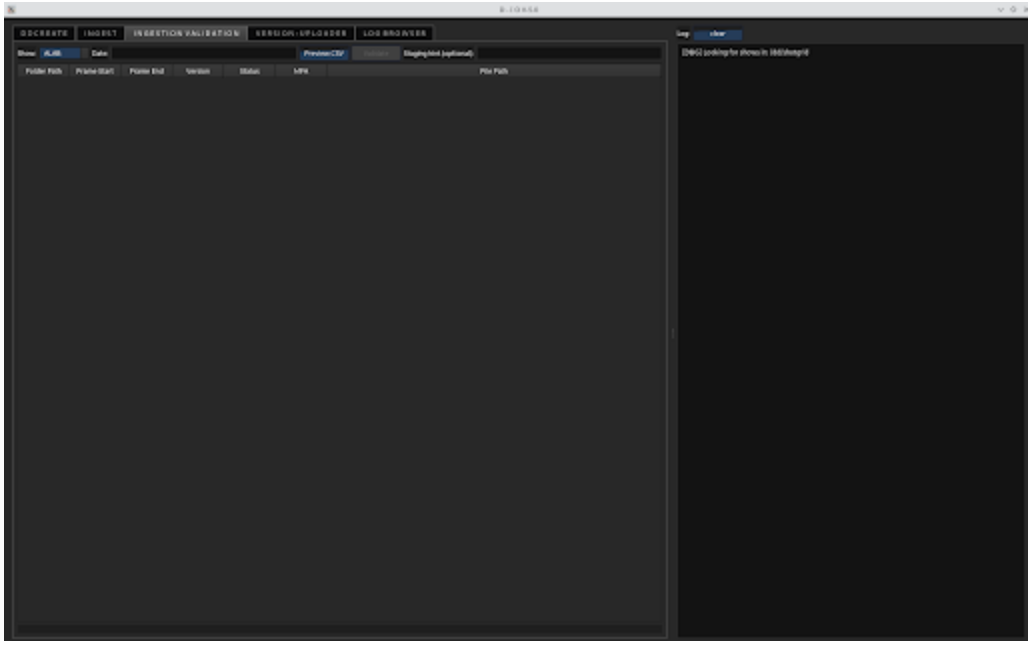
📂 Custom Package Ingestion

- Open the **Local Browser**.
- Select the required **CSV file**.
- Add a **Host** manually.
- Note:
    - During this process, **Show, Date, and Type fields will be disabled**.
    - You can monitor progress in the **Logs section**.



✅ Ingestion Validation

- Select the **Show**.
- Enter the **Date**.
- Click on **Preview CSV**.
- Then click **Validate**.
- The system will begin validation.
- Once completed, the status will display as **OK**.

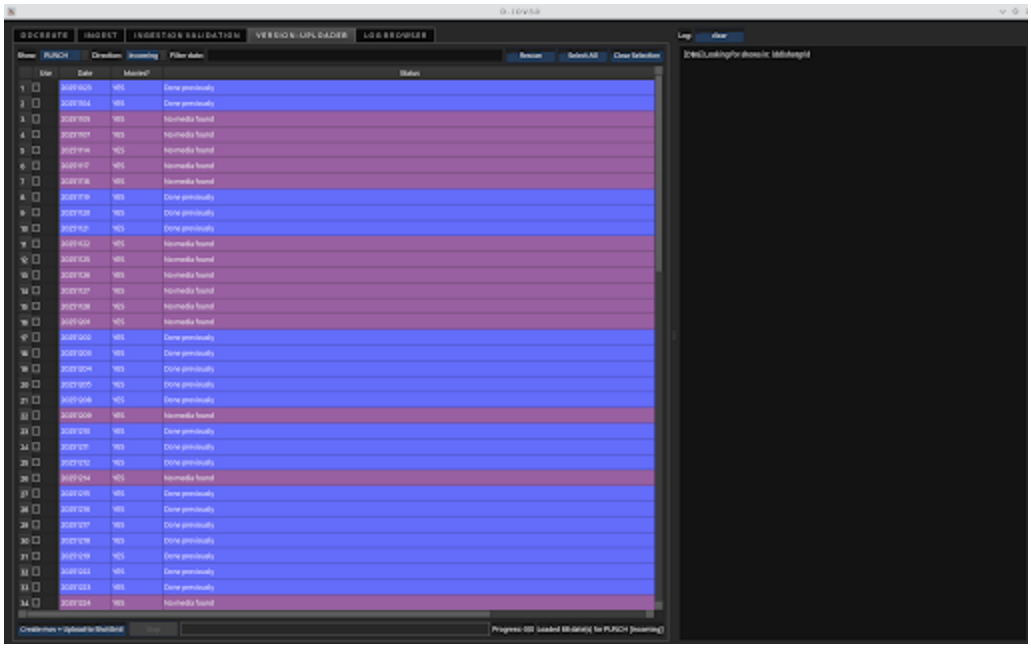


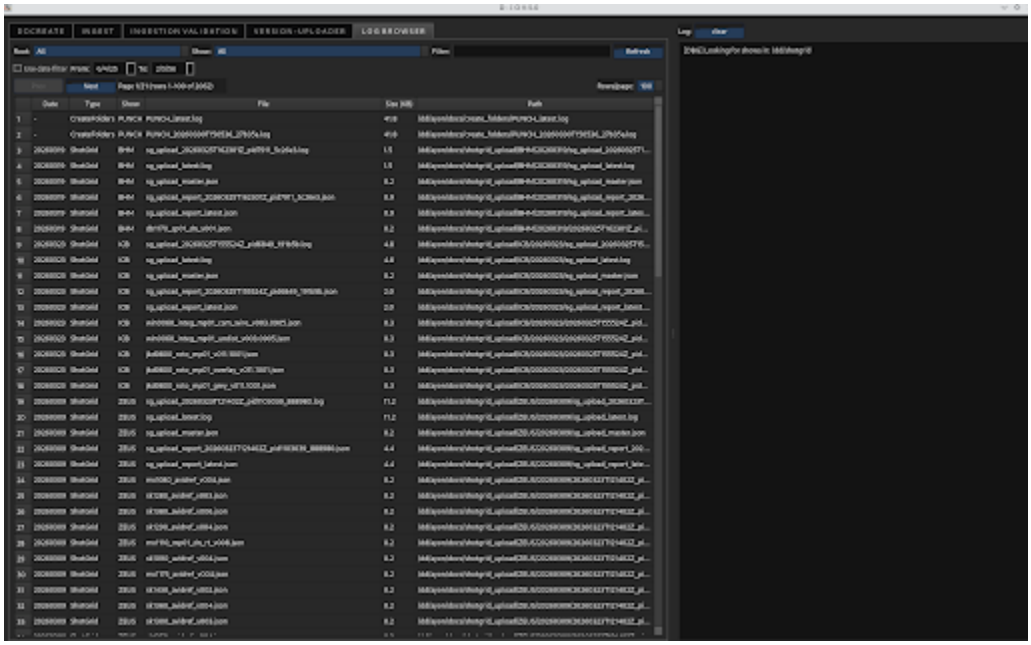
🎬 Version Uploader Tab

- Select the **Show**.
- Choose:
  - Incoming
  - Outgoing
- Click **Rescan**:
  - The system will automatically detect dates to ingest.
- Click **Create MOV + Upload to ShotGrid**:
  - Version ingestion will begin.

Additional Options

- **Select All** → Select all dates.
- **Clear Selection** → Deselect all dates.



📊 Log Browser Tab


- View all logs based on:
  - Show
  - Date
- Helps track ingestion and processing activity.
